

SMART INDEX

Automatically categorises your documents and allocates to the requisite folder in the VDR

Be up and running in a fraction of the time. With Smart Index you can save up to 90% of the time it can take structuring your data room.

THE CHALLENGE

Large amounts of documentation must be organised and structured in the initial steps of setting up your data room. This process is usually carried out with time constraints, and involves repetitive work which can be prone to error.

Imprima's AI-powered tool - Smart Index - automatically categorises and structures the documents you need within your data room. Not only saves 90% of your time, but also gives you the confidence to meet deadlines and an increased capacity to be engaged efficiently on multiple deals.

THE SOLUTION

KEY BENEFITS

EASY TO USE

Smart Index doesn't require technical expertise: it mimicks human behaviour.

It learns from your actions and becomes smarter with each use.

TIME SAVER

Utilise a template VDR, or start training directly in the room with a fraction of the total data set.

Smart Index will take over the bulk of the work and do the rest.

ACCURATE

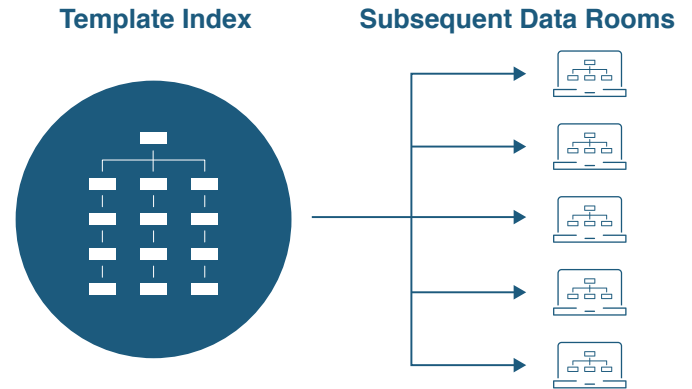

Applying a defined and standardised structure to each VDR ensures it's done your way.

Results are more accurate than the manual process.

HOW DOES IT WORK?

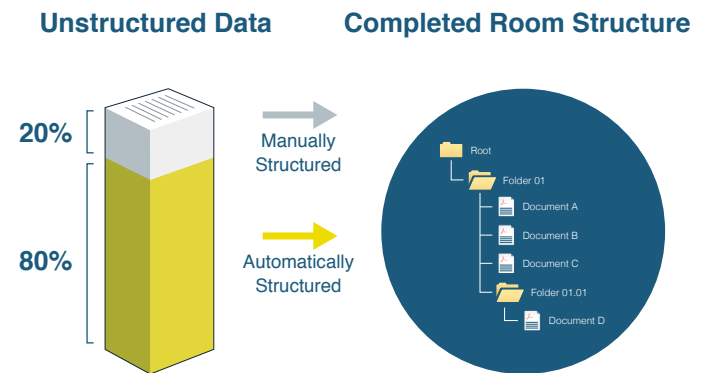

1. Structure and categorise documents based on your desired index

As the one responsible for the structure of the Virtual Data Room, you may have an ideal index you would prefer to work with, bespoke to your process. The AI automatically decides the categories belonging to the documents uploaded, and creates the associated directory of folders, thus working to your index.

2. Structure your room on the fly

If you don't have a predefined standard index, Smart Index can be automatically trained as part of an interactive and iterative structuring process. As you manually structure a small portion of the room, the tool learns how you're building the dataset; it will then automatically structure additional documents. This results in you having to index only a fraction of the documents, while Smart Index does the rest.

The Leading Due Diligence Technology Provider

Imprima handles over \$1 trillion-worth of transactions in over 160 countries. Our mission is to tackle the challenges that threaten to prolong and complicate contract due diligence. We do this by providing those working in Legal, M&A and Real Estate due diligence with easy-to-use SaaS solutions.
